

UL APPROVED SPLIT BOLTS

DESCRIPTION

Splice in ground wires from ground blocks to the existing electrical system ground wire with this split bolt - or - keep your antenna NEC compliant by grounding the antenna metal structure to an existing electrical system ground wire.

Remove the nut/anvil combination part from the threaded bolt, slip the split bolt over the existing 'trunk' ground wire, slip your new ground wire inside the split bolt and tighten the nut/anvil to make a good spliced ground connection.

Many uses - any time you need to splice in a new ground wire or splice ground wires together without cutting through an existing 'trunk' ground wire to get the job done.

FEATURES

- UL approved grounding connectors
- Solid brass construction
- Simple grounded splice in just a few minutes
